

Even Forbo calls in Bolidt

[Forbo Flooring](#) is world leader in linoleum. Over the past 100 years Forbo has developed into the largest linoleum producer. Forbo flooring is especially strong in the public health sector. A market, in which Bolidt is rapidly making up lost ground.

For its storage areas, Forbo could not ignore the synthetic flooring from Bolidt. More than 15 years ago, many of these areas at Forbo Assendelft were fitted with the [Bolidtop® 700](#) system. Because of its excellent properties regarding impact and shock resistance, durability and because the system is low maintenance.

In one of the storage areas, the substrate was in an extremely poor condition; cracking, subsidence and detachment. Bolidt has a solution for this problem, which led to renewed cooperation.

As a solution to the situation, it was decided to remove the entire floor finish (including subfloor). After that, a new fibre enhanced, cement bound subfloor was installed.

To prevent problems in the future, Bolidt advised to apply the Bolidtop® 700 EM system. This system incorporates expanded metal reinforcement, creating a substrate-independent situation, also known as sprung flooring.

As a result, Forbo now has a floor that requires virtually no attention.
